

Lab Supplies

For nearly 100 years, H.M. Royal has been a trusted distributor of raw materials and specialty chemicals. But we offer more than just compounding ingredients. We also carry a wide range of supplies to fit your needs.

We provide quick, convenient access to the supplies you need to keep your production running smoothly. We know how important product quality is to your facility. That's why we only offer supplies that are known for their long-term durability and proven reliability.

Pail Openers

Easily cut, lift and reseal pail and bucket lids with Webstaurantstore® pail openers. With clearly marked ends for cutting and lifting, you can quickly use these tools to slice through seals.

Blades

H.M. Royal carries a wide range of Dexter-Russell® blades including curved-point and flat grind options. We have a variety of sizes available ranging from 6.5" x 3/4" to 9" x 5/8". Blades are ordered and priced per box of 12. Extension blade handles are sold separately.

Gloves

H.M. Royal carries Carolina Glove hot mill gloves that are designed specifically for use in the rubber industry. These gloves provide protection from hot rubber stocks in production rubber mills, calenders, lab mixers, and mills.

Mill Knives

For heavy-duty cutting applications, H.M. Royal offers a large selection of Dexter-Russell mill knives. Whether you're cutting compounded rubber stocks or polymer slabs, we have a knife that is up to the task.

Mold Release

Orvus® WA Paste can be used as a cost-effective mold release for rubber molding. It is an anionic detergent that contains sodium lauryl sulfate and comes in cases of four 7.5-pound jars.

Marking Pens

Fisher® Space Silver Ink Stick Pen features a fine point, which allows for the detailed identification of both uncured and cured samples. Its ink is designed to resist high-temperature post-cure conditions, making the pen a suitable choice for harsh lab conditions.

Rheometer Film

Royfilm (Dartek® C917) perforated rheometer test film is ideal for use with rubber lab instrumentation. It can be used with an RPA, MDR, ORD or Mooney viscometer. The long roll may be used for automated equipment, or sheets may be separated along the perforations to make single sheets for individual tests.

Batch Inclusion Bags

The Lomel® 180 line of plastic film and bags is derived from a family of ethylene vinyl acetate copolymer resins. The Lomel 180 grade melts between 82 °C and 85 °C. These bags are suitable for packing blended and preweighed additives used in mixing rubber and plastic compounds.

Films & Wrapping Tapes

H.M. Royal carries Dartek Cure-Wrap for uniform shrinkage in the machine direction. The tape shrinks tightly around the rubber roller to apply compression throughout the cure cycle.

Rollers & Stickers

H.M. Royal carries Everhard® specialized hand tools and products for the tire and rubberworking industries. These include hand rollers and hand stickers.
